Capstone Seminar on Engineering and Society (W)
version 3.0, November 1, 2013

All EGRS courses work towards actively building and sustaining an inclusive community of learners and contributors. This class fully subscribes to Lafayette College’s commitment to promoting diversity including (but not limited to) race, ethnicity, socioeconomic status, gender, gender identity, sexual orientation, religion, disability, and place of origin.

—Overview and General Information—

Instructor  | Benjamin Cohen
Office      | 304 Acopian Engineering Center, Engineering Studies Program
Phone       | 610.330.3058
E-mail      | cohenb@lafayette.edu
Office Hours| Tues & Thurs 11:00 am-12:00 pm, Weds, 1:00-3:00 pm, and by appointment

Readings
- Required readings available as *.pdf or hyperlinks via Moodle, EGRS.451_SP13
- Lucena, J., J. Schneider, and J. Leydens, eds. (2010) *Engineering and Sustainable Community Development* (Morgan Claypool)

Class times and locations
Tues/Thurs, 9:30—10:45 am, AEC 315

Course Description
This is the senior capstone for majors in the Engineering Studies Program. It is a writing-intensive class intended to provide students with a culminating seminar-style experience. The general theme of the course focuses on the place of engineering and technology in society. We examine the ways cultural values shape technologies, social foundations define the role of engineers, and engineers influence the broader world in efforts to achieve progress. The course asks students to apply the knowledge they gained from both engineering and non-engineering courses to tackle these engineering/society relationships. In this vein, we take the lessons of political philosophy, historical context, cultural awareness, communication, technical proficiency, economic theory, and environmental knowledge from the class prerequisites and apply them to original projects here on campus and the Lehigh Valley region. As a seminar course, students are expected to play an active role in managing the classroom—leading sessions, presenting results, organizing classes, and discussing material.

Students who graduate from the program are expected to have interdisciplinary learning and communication skills, to understand the historically changing place of engineering and technology in society, and to provide leadership in public debates about technology, economy, public policy, and environmental sustainability. Students with this training are prepared to be engineers, policy makers and advisors, planning facilitators, community organizers, consultants,
environmental specialists, and more. The capstone seminar allows you to finalize your preparation for that future.

**Prerequisites**

EGRS 251 (Engineering & Public Policy) and EGRS 261 (Engineering Economics & Management)

**Assignment Values**

- 25% Participation, including discussion leading opportunities
- 30% Response Essays + other misc. writing assignments
- 10% Interim project: design challenge
- 35% Final project (as graded in several parts, including the first memo, first annotated bibliography, updated annotated bibliography, updated memo, classroom workshop contributions, and final version of the project [presentation, memo, and product])
- P/F Preliminary memo (individual document)
- 4% Initial annotated bibliography
- 4% Updated annotated bibliography
- 4% Updated memo (group document)
- 3% Classroom workshop contributions
- 20% Final version of the project: presentation, memo and product

**Specific Student Outcomes:**

1) Conduct analyses of the cultural contexts of technologies and engineering.
2) Apply knowledge from your undergraduate curriculum to these analyses.
3) Demonstrate that your project research is part of an ongoing conversation among scholars.
4) Identify the social, ethical, and economic issues surrounding the information you use in that project.
5) Develop organization, management, and teamwork skills.
6) Demonstrate proficiency with a variety of communications skills.
7) Demonstrate overall preparation for the Engineering Studies arena.

---

**More about course expectations**

**Written assignments:** For all submitted written work, I expect grammatical accuracy, mechanical soundness, and professional presentation. Sloppy and hurried writings reflect sloppy and hurried thinking. They are unacceptable for this seminar. The Response Essays (REs) act in part as checks on your reading comprehension, as brief writing opportunities, and as places for you to work through questions and observations brought out by course readings and discussions.

I do not accept late assignments. If you must miss a class, assignments are due before the class period begins. Discuss with me promptly any assignments due in a class missed because of illness.

**Class participation:** Class participation includes active attentiveness, interest, curiosity, discussion contributions, and other assorted assignments. Mere attendance, which is required, will not be sufficient to receive an outstanding participation grade. For this reason, I reserve the
right to drop you (fail you) for insufficient attendance (more than two classes of unexcused absences). Come to class with curiosity, intellectual ambition, an open mind, some healthy skepticism, and the willingness to engage our topics. If you do that, the rest will take care of itself. To help this cause, to be prepared to participate, you need to complete assigned readings and problems prior to the class period, and to spend time critically analyzing them. Excellence in written work will not make up for delinquency in attendance or lack of preparation for class discussion. Reading alone is insufficient. Students must read and analyze texts.

**Discussion leading:** Each student, with two partners, will take the lead on class discussion for one class topic. These students will be required to prepare class discussion details, questions, themes, and exercises. They meet with me the Monday before class to review the class plan and share ideas and questions. There are four scheduled “interludes” throughout the semester during which these discussion leading classes take place.

**Class projects:** There are two main projects for the semester. One of these is an interlude design project that the class will conduct during the seventh week of the semester. That project will be explained as the week draws near. The second project is the final, main course project, one that asks students to combine the work of engineering with the work of a campus or community partner to produce a publicly available research study. The purpose of the project is three-fold: 1) to demonstrate the interdisciplinary skills of an EGRS major, 2) to develop a public presence for those skills, and 3) to show how EGRS majors can lead and push forward public debates about science, technology and engineering in society. That project is staged in phases, with a brief proposal, a memo that includes agreement from your selected community partner, a preliminary and then updated annotated bibliography, and the final product (which may be a report, a visual art display, a website, other on-line productions, a short video, a prospectus for future research, historical analyses, and more). I will provide more details about all projects and their milestones throughout the semester at Moodle.

**Information Literacy:** EGRS 451 also has an information literacy component to it, which means we will have help from Reference Librarian Lijuan Xu at Skillman in finding, evaluating, and using information. The purpose of this is to help us understand ways in which information is created, disseminated, and organized in our society. These skills are particularly important for our course because we are seeking to understand the field of Engineering Studies, its arguments, intellectual content, and influential texts. The info literacy components are built into the syllabus, specifically with article analysis exercises (Week 5), annotated bibliographies, and a bibliographic essay that centers on the topic of your final project. Those components are intended to help explore how information is disseminated and gathered in our field, to examine our methods and skills in seeking and using information, and to explore some of the economic, social, legal, and ethical issues that arise from new methods of producing and distributing information.

---

**Honor and Academic Integrity**
Student-teacher relationships require trust. For example, students must trust that teachers have made responsible decisions about the structure and content of the courses they teach, and teachers must trust that the assignments students turn in are theirs. Acts that violate this
trust undermine the educational process. At Lafayette College we maintain a community of trust by promoting a culture of honor, principle, and integrity. As this is a College of students, faculty, administrators, and staff, we work as a community to create such a culture. Generally I encourage you to talk to other students about the issues being addressed in the course, and I encourage you to read relevant written material in addition to that assigned in class. However, when it comes to written and oral assignments, the words must be your own and you must cite those whose ideas you use. Please note that for group projects, where some of these terms and issues are muddied, we will discuss further the boundaries of ethical behavior and academic integrity.

Ours is not a laptop course, unless otherwise specified in class. That is, along with a standard request to silence and stow away your cell phones during class, I ask that you keep laptop screens closed out of respect for your peers and for the betterment of classroom atmosphere.

**Cell Phone Policy**

All cell phones must be silenced and stored away during class. Please do so out of respect for the class space and your classmates. Students who use their cell phones in class will be asked to leave.

**Grading Schema**

<table>
<thead>
<tr>
<th>Grade</th>
<th>Score Range</th>
</tr>

**Assignment summary**

- **Every class**
  - Attendance
  - Readings and preparation for discussion
  - Participation
  - Readings and preparation for discussion
  - Participation

- **Frequently**
  - Response
  - Essays/Homework
  - Notes on project ideas
  - Synthesis of prior week and its relation to current week

- **Occasionally**
  - Discussion leading
  - Meeting with professor
  - Meeting with Reference Librarians
  - Article-in-review

- **Semesterly**
  - Course-long project

**A note on credit hour provisions**

The student work in this course is in full compliance with the federal definition of a four credit hour course. Please see the Lafayette College Compliance webpage for the full policy and practice statement.
Note: All readings are to be read for the day given below (as opposed to being assigned on that day). Almost all readings are available at the class Moodle site.

Project ideas/topics to follow and build on from the Spring 2012 and 2013 classes:

1. **Identity**—who EGRS majors are, what they do, and what their specialties are
   a. Development, EWB, Study Abroad, ASB
   b. History of Engineering at Lafayette

2. **Curriculum**—course development opportunities, curricular reform, short courses
   a. Sports engineering
   b. Entrepreneurship
   c. Technology, Engineering, and Ethics

3. **Sustainability**—environmental projects on campus and in the community
   a. Fracking politics
   b. Green roofs
   c. Student Farm (LaFarm) and Community Garden project coordination
   d. Solar charger for portable electronics
