Skillman Library is pleased to announce a summer research program for students interested in the digital humanities.

We are looking for motivated students to work on a digital humanities research project of their own design from June 1-July 10. Students will initiate and develop their own research projects while participating in workshops and weekly discussions of readings from a shared syllabus that addresses the major questions and principles in the field of digital humanities.

This session is designed as an Internship under the INT 200 course rubric with a fulltime commitment of at least six-weeks. This is a paid internship offering $3,000 as well as on-campus housing, funded through Lafayette College’s Digital Humanities Grant from the Andrew W. Mellon Foundation.¹

Emily McGinn, Mellon Postdoctoral Fellow in Digital Humanities, will lead the session with support from colleagues in Digital Scholarship Services and participation by other members of Skillman Library.

At the end of the summer session students will create a small Digital Humanities project and present on their work in the fall.

Benefits of this program include:
  o Building DH skills with a community of other scholars
  o Time to work on your own ideas and develop new research questions
  o Practical experience in digital tools and project management
  o Training that could lead to future EXCEL/job opportunities
  o Professionalization of research and presentation skills

To find out more about Digital Humanities at Lafayette visit http://sites.lafayette.edu/dhlaf.

To apply: please send your resume, a writing sample, a copy of your unofficial transcripts and a 100-200 word summary of your proposed digital project or interest in learning about digital humanities to Emily McGinn mcginne@lafayette.edu. Applications received by March 15, 2015 will receive first consideration. An interview will be required for final candidates.
