

The color is always on the right
Red is Westbound
Green is Eastbound

There are also crossroads
These need a different direction
The switch positions are
marked as so:
This implies that if pin 2 is
asserted the point will branch

The arrow indicates pin 1

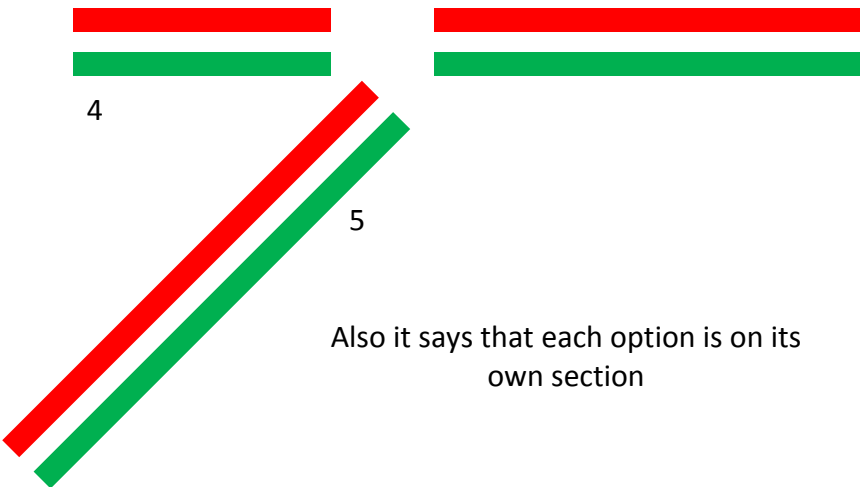

1	3	5	7
2	4	6	8

The color shows what track
has a positive voltage when
the LED is each color

Also it says the entire track in this area
is on the same circuit

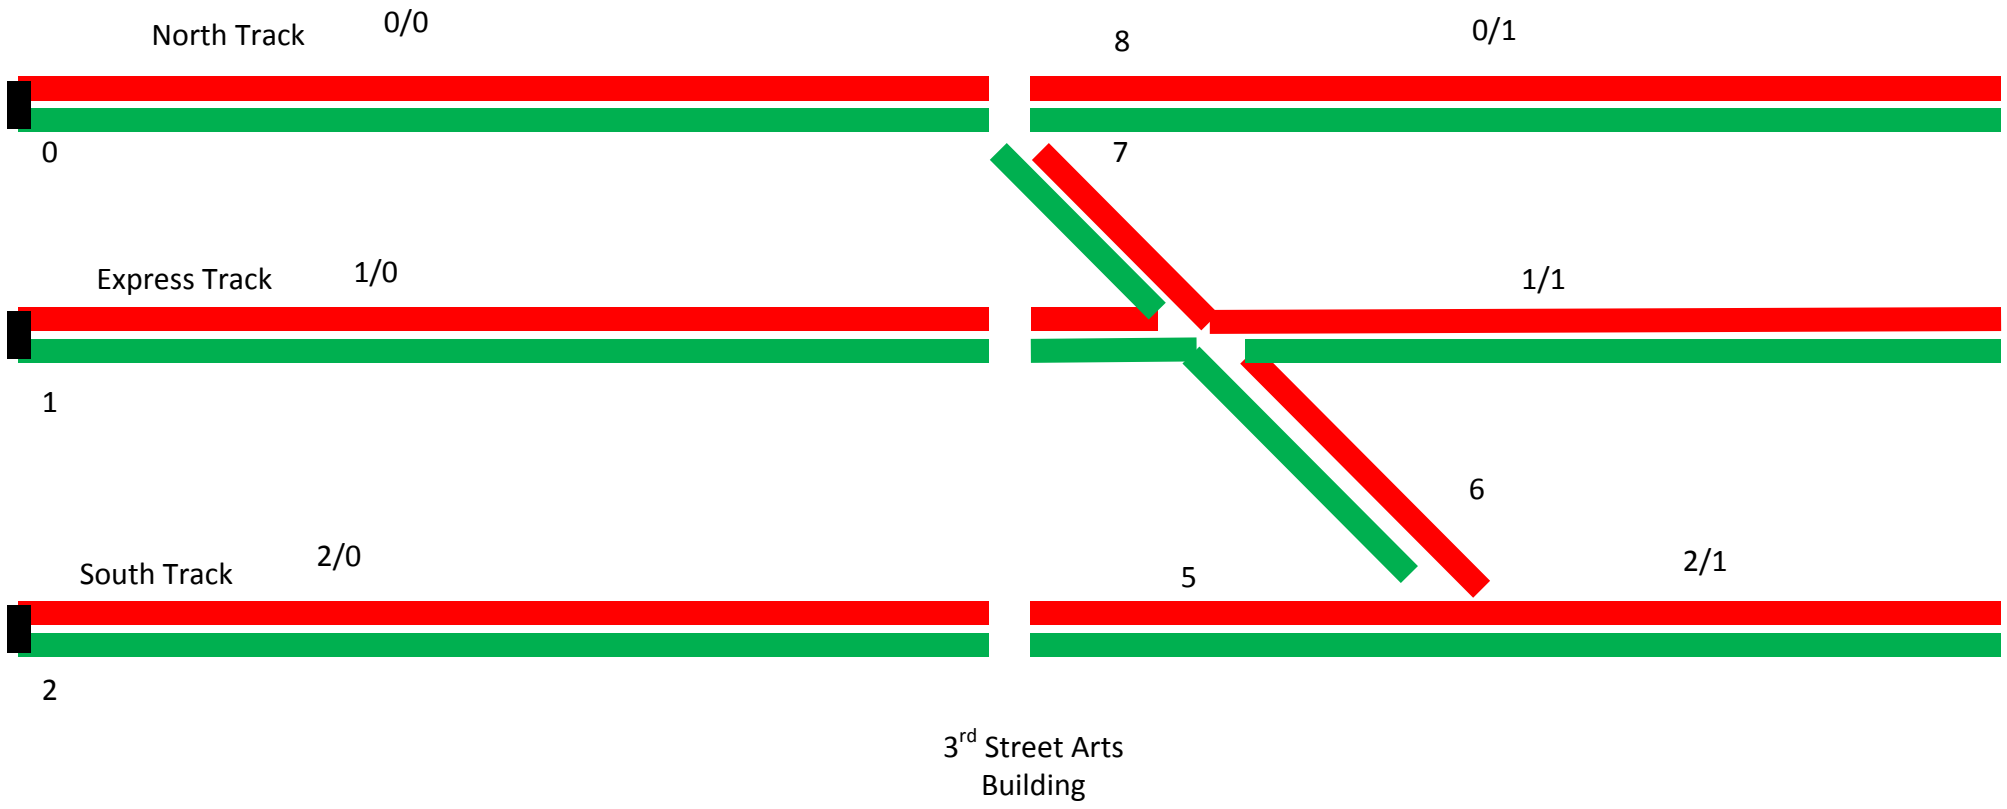

The switch positions are
marked as so:
This implies that if pin 5 is
asserted the point will branch

Also it says that each option is on its
own section

This shows that there is a buffer
Also it shows that reed switch 0 is in use on this section
